

YOU'RE ALWAYS SAFER WITH A RATED AUTOSAFE PRODUCT

On October the 22nd 2010, disaster struck when a massive explosion literally ripped through a Tradesman's Van and destroyed it.

Emergency crews were called to the scene of mayhem at Dunscombe Place in Chelsea Heights, Victoria.

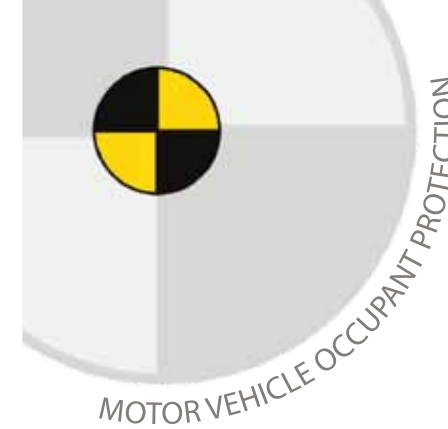

Debris was scattered more than 100 metres away (as well as in trees and on house roofs) from the explosion with nearby properties windows being blown out.

As you can see from the image, the Autosafe Cargo Barrier remains largely intact whilst the van is severely damaged.

Here at Autosafe, we design, manufacture and test our Australian Products to comply with the Stringent Design Rules (AS/NZS 4034.1: 2001.)

RATED ANTI-VAPOUR PARTITIONS

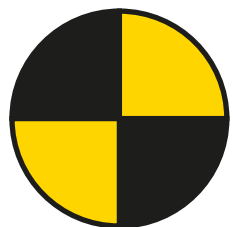

COMPLIES WITH AS/NZS 4034.1: 2001

“I most certainly would not consider installing any other barrier in my future vehicles and recommend Autosafe products to everyone”

An extract from a Satisfied Client after she had rolled her Vehicle (which had an Autosafe Cargo Barrier installed).
